Matacryl Carpark Membrane

Equus Matacryl Carpark Membrane is a liquid-applied PUMMA waterproofing system for exterior carpark decks, ramps and trafficable podiums. Combining rapid curing with a durable, slip-resistant finish, the system provides long-term protection for concrete surfaces while minimising disruption during installation.

The multi-layer system incorporates a primer, elastomeric waterproofing membrane, wear layer and topcoats to create a highly flexible, crack-bridging surface. Designed for vehicular traffic, it delivers excellent impact, puncture and abrasion resistance while maintaining performance at low temperatures.

Suitable for carparks, bridge decks, tunnels and other waterproofing applications, Matacryl can be installed across a wide range of temperatures and typically cures within one hour. The system is supported by certified applicators, project-specific technical advice and a 10-year warranty.

Key Product Benefits:

- Highly flexible, crack-bridging waterproofing membrane
- Designed for exterior vehicular traffic and heavy wear
- Fast curing for minimal downtime and rapid return to service
- Slip-resistant finish using graded aggregates
- Very high impact and puncture resistance
- Strong adhesion to concrete substrates
- Performs in low-temperature conditions
- Durable chemical and abrasion resistance with easy maintenance

Technical Support:

- Project-specific specifications & details
- Approved installation nationwide & onsite QA
- System warranties
