

EQUUS SOPREMA TANKING SYSTEMS

Underground waterproofing membrane

equus

AUTHORISED DISTRIBUTOR

SOPREMA

Equus SOPREMA Colphene Tanking Membrane systems are high-tech quality waterproofing membranes manufactured by SOPREMA. Specifically designed for underground, below slab and external wall waterproofing purposes. The membranes are composed of elastomer modified bitumen with a tough polyester geotextile reinforcement that provides strong and flexible, puncture resistant tanking. The **Colphene BSW** and **DeboFlex Special** membranes have a top surface that creates a superior adhesion to concrete by means of a chemical and mechanical bond. This makes the membrane suitable for pre-applied or post-applied waterproofing installation. It can be torch-applied, self-adhered or loose-laid with torch welded laps. The **Colphene 3000** self-adhesive membrane is used for vertical areas up to 3m depth.

Complete system products and accessories include:

- DeboFlex 3.5 CS/F K180 Special Bitumen membrane by SOPREMA
- Colphene BSW-H Bitumen membrane by SOPREMA
- Colphene BSW-V Bitumen membrane by SOPREMA
- Colphene 3000 Self-adhesive membrane by SOPREMA
- Alsan Flashing Liquid membrane by SOPREMA
- Matacyl Liquid membrane
- Schomburg Aquafin CJ4 and CJ6 Waterstops
- Equus Swellseal Waterstop
- Equus Drainage & Protection layer
- Equus Termination Bar

Key Benefits:

- Can be installed on a moist and/or dusty surface
- Does not rely on pressure or curing
- Self-adhesive membrane available for walls
- Integrated granular protection and trafficable
- Membrane adheres to reinforced concrete floor slab
- Heat welded, watertight laps with dual lap for installing over thermal insulation (XPS, HD EPS)
- High hydrostatic pressure resistance
- 50 year underground durability
