Equus Industried Ltd

Chemwatch Hazard Alert Code: 2

Issue Date: 08/09/2023 Print Date: 11/09/2023 S.GHS.AUS.EN.E

SECTION 1 Identification of the substance / mixture and of the company / undertaking

Safety Data Sheet according to WHS Regulations (Hazardous Chemicals) Amendment 2020 and ADG requirements

Product Identifier

Chemwatch: 5631-05

Version No: 3.1

Product name	Equus Keim Lotexan-N	
Chemical Name	Not Applicable	
Synonyms	Not Available	
Proper shipping name	FLAMMABLE LIQUID, N.O.S. (contains naphtha petroleum, light aromatic solvent, naphtha, petroleum, hydrodesulfurised heavy and isooctyltrimethoxysilane)	
Chemical formula	Not Applicable	
Other means of identification	Not Available	

Relevant identified uses of the substance or mixture and uses advised against

Relevant identified uses	Hydrophobing agent/water repellent Use according to manufacturer's directions.
--------------------------	---

Details of the manufacturer or supplier of the safety data sheet

Registered company name	Equus Industried Ltd
Address	Sheffield Street, Riverlands, PO Box 601 Blenheim New Zealand
Telephone	+64 3 578 0214
Fax	Not Available
Website	www.equus.nz
Email	info@equus.nz

Emergency telephone number

Association / Organisation	Equus Industried Ltd	
Emergency telephone numbers	0800 764 766 (New Zealand National Poison Centre, 24/7)	
Other emergency telephone numbers	Not Available	

SECTION 2 Hazards identification

Classification of the substance or mixture

Poisons Schedule	S5
Classification ^[1]	Flammable Liquids Category 3, Aspiration Hazard Category 1, Serious Eye Damage/Eye Irritation Category 2B, Specific Target Organ Toxicity - Single Exposure (Narcotic Effects) Category 3, Hazardous to the Aquatic Environment Long-Term Hazard Category 2
Legend:	1. Classified by Chemwatch; 2. Classification drawn from HCIS; 3. Classification drawn from Regulation (EU) No 1272/2008 - Annex VI

Label elements

Hazard pictogram(s)	
Signal word	Danger

Hazard statement(s)

AUH066	Repeated exposure may cause skin dryness and cracking.
H226	Flammable liquid and vapour.
H304	May be fatal if swallowed and enters airways.
H320	Causes eye irritation.
H336	May cause drowsiness or dizziness.
H411	Toxic to aquatic life with long lasting effects.

P210	Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking.	
P271	Use only outdoors or in a well-ventilated area.	
P240	Ground and bond container and receiving equipment.	
P241	Use explosion-proof electrical/ventilating/lighting/intrinsically safe equipment.	
P242	Use non-sparking tools.	
P243	Take action to prevent static discharges.	
P261	Avoid breathing mist/vapours/spray.	
P273	Avoid release to the environment.	
P264	Wash all exposed external body areas thoroughly after handling.	
P280	Wear protective gloves and protective clothing.	

Precautionary statement(s) Response

P301+P310	IF SWALLOWED: Immediately call a POISON CENTER/doctor/physician/first aider.		
P331	Do NOT induce vomiting.		
P370+P378	In case of fire: Use alcohol resistant foam or normal protein foam to extinguish.		
P305+P351+P338	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.		
P312	Call a POISON CENTER/doctor/physician/first aider/if you feel unwell.		
P337+P313	If eye irritation persists: Get medical advice/attention.		
P391	Collect spillage.		
P303+P361+P353	IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water [or shower].		
P304+P340	IF INHALED: Remove person to fresh air and keep comfortable for breathing.		

Precautionary statement(s) Storage

P403+P235	Store in a well-ventilated place. Keep cool.
P405	Store locked up.

Precautionary statement(s) Disposal

P501

Dispose of contents/container to authorised hazardous or special waste collection point in accordance with any local regulation.

SECTION 3 Composition / information on ingredients

Substances

See section below for composition of Mixtures

Mixtures

CAS No	%[weight]	Name
64742-82-1.	50-100	naphtha, petroleum, hydrodesulfurised heavy
34396-03-7	<5	isooctyltrimethoxysilane
64742-95-6.	<1	naphtha petroleum, light aromatic solvent
3648-18-8	<1	di-n-octyl tin dilaurate
Legend:	1. Classified by Chemwatch; 2. Classification drawn from C&L: *	Classification drawn from HCIS; 3. Classification drawn from Regulation (EU) No 1272/2008 - Annex VI; 4. EU IOELVs available

SECTION 4 First aid measures

Description of first aid measures			
Eye Contact	 If this product comes in contact with the eyes: Wash out immediately with fresh running water. Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids. Seek medical attention without delay; if pain persists or recurs seek medical attention. Removal of contact lenses after an eye injury should only be undertaken by skilled personnel. 		
Skin Contact	 If skin contact occurs: Immediately remove all contaminated clothing, including footwear. Flush skin and hair with running water (and soap if available). Seek medical attention in event of irritation. 		
Inhalation	 If fumes or combustion products are inhaled remove from contaminated area. Lay patient down. Keep warm and rested. Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures. Apply artificial respiration if not breathing, preferably with a demand valve resuscitator, bag-valve mask device, or pocket mask as trained. Perform CPR if necessary. Transport to hospital, or doctor. 		
Ingestion	 If swallowed do NOT induce vomiting. If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration. Observe the patient carefully. Never give liquid to a person showing signs of being sleepy or with reduced awareness; i.e. becoming unconscious. Give water to rinse out mouth, then provide liquid slowly and as much as casualty can comfortably drink. Seek medical advice. 		

Continued...

Equus Keim Lotexan-N

- Avoid giving milk or oils.
- Avoid giving alcohol.

If spontaneous vomiting appears imminent or occurs, hold patient's head down, lower than their hips to help avoid possible aspiration of vomitus.

Indication of any immediate medical attention and special treatment needed

Any material aspirated during vomiting may produce lung injury. Therefore emesis should not be induced mechanically or pharmacologically. Mechanical means should be used if it is considered necessary to evacuate the stomach contents; these include gastric lavage after endotracheal intubation. If spontaneous vomiting has occurred after ingestion, the patient should be monitored for difficult breathing, as adverse effects of aspiration into the lungs may be delayed up to 48 hours. For petroleum distillates

In case of ingestion, gastric lavage with activated charcoal can be used promptly to prevent absorption - decontamination (induced emesis or lavage) is controversial and should be considered on the merits of each individual case; of course the usual precautions of an endotracheal tube should be considered prior to lavage, to prevent aspiration.

- · Individuals intoxicated by petroleum distillates should be hospitalized immediately, with acute and continuing attention to neurologic and cardiopulmonary function.
- Positive pressure ventilation may be necessary.

· Acute central nervous system signs and symptoms may result from large ingestions of aspiration-induced hypoxia.

After the initial episode, individuals should be followed for changes in blood variables and the delayed appearance of pulmonary oedema and chemical pneumonitis. Such patients should be followed for several days or weeks for delayed effects, including bone marrow toxicity, hepatic and renal impairment Individuals with chronic pulmonary disease will be more seriously impaired, and recovery from inhalation exposure may be complicated.

· Gastrointestinal symptoms are usually minor and pathological changes of the liver and kidneys are reported to be uncommon in acute intoxications.

Chlorinated and non-chlorinated hydrocarbons may sensitize the heart to epinephrine and other circulating catecholamines so that arrhythmias may occur. Careful consideration of this potential adverse effect should precede administration of epinephrine or other cardiac stimulants and the selection of bronchodilators.

SECTION 5 Firefighting measures

Extinguishing media

- Foam.
- Dry chemical powder.
- BCF (where regulations permit).
- Carbon dioxide.
- Water spray or fog Large fires only.

Special hazards arising from the substrate or mixture

Fire Incompatibility	Avoid contamination with oxidising agents i.e. nitrates, oxidising acids, chlorine bleaches, pool chlorine etc. as ignition may result
Advice for firefighters	
Fire Fighting	 Alert Fire Brigade and tell them location and nature of hazard. May be violently or explosively reactive. Wear breathing apparatus plus protective gloves. Prevent, by any means available, spillage from entering drains or water course. If safe, switch off electrical equipment until vapour fire hazard removed. Use water delivered as a fine spray to control fire and cool adjacent area. Avoid spraying water onto liquid pools. DO NOT approach containers suspected to be hot. Cool fire exposed containers with water spray from a protected location. If safe to do so, remove containers from path of fire.
Fire/Explosion Hazard	 Liquid and vapour are flammable. Moderate fire hazard when exposed to heat or flame. Vapour forms an explosive mixture with air. Moderate explosion hazard when exposed to heat or flame. Vapour may travel a considerable distance to source of ignition. Heating may cause expansion or decomposition leading to violent rupture of containers. On combustion, may emit toxic fumes of carbon monoxide (CO). Combustion products include: carbon dioxide (CO2) metal oxides silicon dioxide (SiO2) other pyrolysis products typical of burning organic material.
HAZCHEM	•3Y

SECTION 6 Accidental release measures

Personal precautions, protective equipment and emergency procedures

See section 8

Environmental precautions

See section 12

Methods and material for containment and cleaning up

Minor Spills	 Remove all ignition sources. Clean up all spills immediately. Avoid breathing vapours and contact with skin and eyes. Control personal contact with the substance, by using protective equipment. Contain and absorb small quantities with vermiculite or other absorbent material. Wipe up. Collect residues in a flammable waste container.
Major Spills	 Clear area of personnel and move upwind. Alert Fire Brigade and tell them location and nature of hazard. May be violently or explosively reactive. Wear breathing apparatus plus protective gloves.

Prevent, by any means available, spillage from entering drains or water course.
Consider evacuation (or protect in place).
No smoking, naked lights or ignition sources.
Increase ventilation.
Stop leak if safe to do so.
Water spray or fog may be used to disperse /absorb vapour.
Contain spill with sand, earth or vermiculite.
Use only spark-free shovels and explosion proof equipment.
Collect recoverable product into labelled containers for recycling.
Absorb remaining product with sand, earth or vermiculite.
Collect solid residues and seal in labelled drums for disposal.
Wash area and prevent runoff into drains.
If contamination of drains or waterways occurs, advise emergency services.

Personal Protective Equipment advice is contained in Section 8 of the SDS.

SECTION 7 Handling and storage

Precautions for safe handling	
Safe handling	 Even with proper grounding and bonding, this material can still accumulate an electrostatic charge. If sufficient charge is allowed to accumulate, electrostatic discharge and ground in values can occur. Containers, even those that have been emptied, may contain explosive vapours. Do NOT cat, dill, grind, weld or perform similar operations on or near containers. Do NOT cat, dill, grind, weld or perform similar operations on or near containers. Do NOT cat, dill, grind, weld or perform similar operations on or near containers. Do NOT cat, dill, grind, weld or perform similar operations on or near containers. Do NOT cat, dill, grind, weld or perform a contrainers. Do NOT case compressed at info filing discharging or handling operations. A void splash filing. Do NOT use compressed at info filing discharging or handling operations. Wait 30 minutes after tank filing (for tanks such as those on road tanker voldes) before opening hatches or manholes. Wait 30 minutes after tank filing (for tanks such as those on electrostatic discharge in the form particles) before opening hatches or manholes. Wait 30 minutes after tank filing (for tanks such as those on electrostatic charge. If sufficient charge is allowed to accumulate an electrostatic discharge and ignition of flammable discussed and the compare sufficient of the set allowed to accumulate an electrostatic discharge and ignition of flammable discussed and the compare sufficient of the set allowed to accumulate on electrostatic charge. These include but are electrostatic discharge (a grind) and filing discussing (a grind), wacum truck concert. operations that may griny is to additional hazards that result operations, and mechanical movements. These activities may electrostatic discharge (a grind) and dilling discussing), or and filing discussing (a cum truck concert. operations, and mechanical movements. These activities may ele
Other information	 Store in original containers in approved flammable liquid storage area. Store away from incompatible materials in a cool, dry, well-ventilated area. DO NOT store in pits, depressions, basements or areas where vapours may be trapped. No smoking, naked lights, heat or ignition sources. Storage areas should be clearly identified, well illuminated, clear of obstruction and accessible only to trained and authorised personnel - adequate security must be provided so that unauthorised personnel do not have access. Store according to applicable regulations for flammable materials for storage tanks, containers, piping, buildings, rooms, cabinets, allowable quantities and minimum storage distances. Use non-sparking ventilation systems, approved explosion proof equipment and intrinsically safe electrical systems. Have appropriate extinguishing capability in storage area (e.g. portable fire extinguishers - dry chemical, foam or carbon dioxide) and flammable gas detectors. Keep adsorbents for leaks and spills readily available. Protect containers against physical damage and check regularly for leaks. Observe manufacturer's storage and handling recommendations contained within this SDS. In addition, for tank storages (where appropriate): Store in grounded, properly designed and approved vessels and away from incompatible materials. For bulk storages, consider use of floating roof or nitrogen blanketed vessels; where venting to atmosphere is possible, equip storage tank
	Continued

	 vents with flame arrestors; inspect tank vents during winter conditions for vapour/ ice build-up. Storage tanks should be above ground and diked to hold entire contents.
Conditions for safe storage, in	cluding any incompatibilities
Suitable container	 Packing as supplied by manufacturer. Plastic containers may only be used if approved for flammable liquid. Check that containers are clearly labelled and free from leaks. For low viscosity materials (i) : Drums and jerry cans must be of the non-removable head type. (ii) : Where a can is to be used as an inner package, the can must have a screwed enclosure. For materials with a viscosity of at least 2680 cSt. (23 deg. C) For manufactured product having a viscosity of at least 250 cSt. (23 deg. C) Manufactured product that requires stirring before use and having a viscosity of at least 20 cSt (25 deg. C): (i) Removable head packaging; (ii) Cans with friction closures and (iii) low pressure tubes and cartridges may be used. Where combination packages are used, and the inner packages are of glass, there must be sufficient inert cushioning material in contact with inner and outer packages In addition, where inner packagings are glass and contain liquids of packing group I there must be sufficient inert absorbent to absorb any spillage, unless the outer packaging is a close fitting moulded plastic box and the substances are not incompatible with the plastic.
Storage incompatibility	The substance may be or contains a "metalloid" The following elements are considered to be metalloids; boron,silicon, germanium, arsenic, antimony, tellurium and (possibly) polonium The electronegativities and ionisation energies of the metalloids are between those of the metals and nonmetals, so the metalloids exhibit characteristics of both classes. The reactivity of the metalloids depends on the element with which they are reacting. For example, boron acts as a nonmetal when reacting with sodium yet as a metal when reacting with fluorine. Unlike most metalloids, by the reaction with certain strong acid, but it also forms arsenites by reactions with strong bases. Most metalloids have a multiplicity of oxidation states or valences. For instance, tellurium has the oxidation states +2, -2, +4, and +6. Metalloids react like non-metals when they react with metals and act like metals when they react with non-metals. • Avoid reaction with oxidising agents

SECTION 8 Exposure controls / personal protection

Control parameters

Occupational Exposure Limits (OEL)

INGREDIENT DATA						
Source	Ingredient	Material name	TWA	STEL	Peak	Notes
Australia Exposure Standards	naphtha, petroleum, hydrodesulfurised heavy	White spirits	790 mg/m3	Not Available	Not Available	Not Available
Australia Exposure Standards	di-n-octyl tin dilaurate	Tin, organic compounds (as Sn)	0.1 mg/m3	0.2 mg/m3	Not Available	(g) Some compounds in these groups are classified as carcinogenic or as sensitisers. Check individual classification details on the safety data sheet for information on classification.

Emergency Limits					
Ingredient	TEEL-1	TEEL-2		TEEL-3

Occupational Exposure Banding	Occupational Exposure Banding				
Ingredient	Occupational Exposure Band Rating		Occupational Exp	osure B	and Limit

Notes:

Occupational exposure banding is a process of assigning chemicals into specific categories or bands based on a chemical's potency and the adverse health outcomes associated with exposure. The output of this process is an occupational exposure band (OEB), which corresponds to a range of exposure concentrations that are expected to protect worker health. Ingradiant

Occupational Exposure Band Limit

Type of Contaminant:		Air Speed		
solvent, vapours, degreasing etc., evaporating from tank (in	n still air).	0.25-0.5 m/s (50-100 f/min.)		
aerosols, fumes from pouring operations, intermittent conta plating acid fumes, pickling (released at low velocity into zo	iner filling, low speed conveyer transfers, welding, spray drift, ne of active generation)	0.5-1 m/s (100-200 f/min.)		
direct spray, spray painting in shallow booths, drum filling, o generation into zone of rapid air motion)	conveyer loading, crusher dusts, gas discharge (active	1-2.5 m/s (200-500 f/min.)		
Within each range the appropriate value depends on:				
Lower end of the range	Upper end of the range			
1: Room air currents minimal or favourable to capture	1: Disturbing room air currents			
2: Contaminants of low toxicity or of nuisance value only.	2: Contaminants of high toxicity			
3: Intermittent, low production.	3: High production, heavy use			
4: Large hood or large air mass in motion	4: Small hood-local control only			
 accordingly, after reference to distance from the contaminating source. 1-2 m/s (200-400 f/mi.) for extraction of solvents generated in a tank 2 meters distant from the extraction point. Other mechanical considerations, producing performance deficits within the extraction apparatus, make it essential that theoretical air velocities are multiplied by factors of 10 or more when extraction systems are installed or used. Adequate ventilation is typically taken to be that which limits the average concentration to no more than 25% of the LEL within the building, room or enclosure containing the dangerous substance. Ventilation for plant and machinery is normally considered adequate if it limits the average concentration of any dangerous substance that might potentially be present to no more than 25% of the LEL. However, an increase up to a maximum 50% LEL can be acceptable where additional safeguards are provided to prevent the formation of a hazardous explosive atmosphere. For example, gas detectors linked to emergency shutdown of the process might be used together with maintaining or increasing the exhaust ventilation on solvent evaporating ovens and gas turbine enclosures. Temporary exhaust ventilation systems may be provided for non-routine higher-risk activities, such as cleaning, repair or maintenance in tanks or other confined spaces or in an emergency after a release. The work procedures for such activities should be carefully considered. The atmosphere should be continuously monitored to ensure that ventilation is adequate and the area remains safe. Where workers will enter the space, the ventilation about the concentration of the dangerous substance does not exceed 10% of the LEL (irrespective of the provision of suitable breathing apparatus) 				
 Safety glasses with side shields. Chemical goggles. [AS/NZS 1337.1, EN166 or national equivalent] Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants. A written policy document, describing the wearing of lenses or restrictions on use, should be created for each workplace or task. This should include a review of lens absorption and adsorption for the class of chemicals in use and an account of injury experience. Medical and first-aid personnel should be trained in their removal and suitable equipment should be readily available. In the event of chemical exposure, begin eye irrigation immediately and remove contact lens as soon as practicable. Lens should be removed at the first signs of eye redness or irritation - lens should be removed in a clean environment only after workers have washed hands thoroughly. [CDC NIOSH Current Intelligence Bulletin 59]. 				
See Hand protection below				
 See nand protection below Wear chemical protective gloves, e.g. PVC. Wear safety footwear or safety gumboots, e.g. Rubber The selection of suitable gloves does not only depend on the material, but also on further marks of quality which vary from manufacturer to manufacturer. Where the chemical is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application. The exact break through time for substances has to be obtained from the manufacturer of the protective gloves and has to be observed when making a final choice. Personal hygiene is a key element of effective hand care. Gloves must only be worn on clean hands. After using gloves, hands should be washed and dried thoroughly. Application of a non-perfumed moisturiser is recommended. Suitability and durability of glove type is dependent on usage. Important factors in the selection of gloves include: 				
	 action of the spectral and the particular process and che Employers may need to use multiple types of controls to prev For flammable liquids and flammable gases, local exhaust ve equipment should be explosion-resistant. Air contaminants generated in the workplace possess varying circulating air required to effectively remove the contaminant. Type of Contaminant: solvent, vapours, degreasing etc., evaporating from tank (ir aerosols, fumes from pouring operations, intermittent contaplating acid fumes, pickling (released at low velocity into zo direct spray, spray painting in shallow booths, drum filling, or generation into zone of rapid air motion) Within each range the appropriate value depends on: Lower end of the range 1: Room air currents minimal or favourable to capture 2: Contaminants of low toxicity or of nuisance value only. 3: Intermittent, low production. 4: Large hood or large air mass in motion Simple theory shows that air velocity falls rapidly with distance with the square of distance from the extraction point (in simpl accordingly, after reference to distance from the contaminatin 1-2 m/s (200-400 f/min.) for extraction systems are installed o Adequate ventilation is typically taken to be that which limits room or enclosure containing the dangerous substance. Ventilation for plant and machinery is normally considered a potentially be present to no more than 25% of the LEL. Howe safeguards are provided to prevent the formation of a hazard shutdown of the process might be used together with maintai turbine enclosures. Temporary exhaust ventilation systems may be provided for or other confined spaces or is an emergency after a release. Tomcarjo exhaust ventilation systems may be provided for or other confined spaces or is an emergency after a release. Tomcarding explansion should ensure that the concentration of provision of suitable breathing apparatus) Kear chemical	sected alon system must match the particular process and chemical or contaminant in use. Employers may need to use multiple types of controls to prevent employers everapsours. For flammable figuids and flammable gases, local exhaust ventilation or a process enclosure ventilation system may be require circulating air required to effectively remove the contaminant. All contaminants generated in the workplace possess varying "tescape" velicities which, in turn, determine the "capture veloc circulating air required to effectively remove the contaminant. Continued...

	chemical resistance of glove material,
	· glove thickness and
	· dexterity
	Select gloves tested to a relevant standard (e.g. Europe EN 374, US F739, AS/NZS 2161.1 or national equivalent).
	· When prolonged or frequently repeated contact may occur, a glove with a protection class of 5 or higher (breakthrough time greater than 240
	minutes according to EN 374, AS/NZS 2161.10.1 or national equivalent) is recommended.
	 When only brief contact is expected, a glove with a protection class of 3 or higher (breakthrough time greater than 60 minutes according to EN 374, AS/NZS 2161.10.1 or national equivalent) is recommended.
	Some glove polymer types are less affected by movement and this should be taken into account when considering gloves for long-term use.
	• Containinateu gioves should be replaced.
	As defined in AS INF -7-35-50 in any application, gloves are fated as.
	• Excellent when breaktinough time > 400 min
	- Good when breakthrough time > 20 min
	For energial applications, doves with a thickness typically greater than 0.35 mm, are recommended
	I should be emphasised that glove thickness is not necessarily a good predictor of glove resistance to a specific chemical, as the permeation
	efficiency of the glove will be dependent on the exact composition of the glove material. Therefore, glove selection should also be based on
	consideration of the task requirements and knowledge of breakthrough times.
	Glove thickness may also vary depending on the glove manufacturer, the glove type and the glove model. Therefore, the manufacturers technical data should always be taken into account to ensure selection of the most appropriate glove for the task.
	Note: Depending on the activity being conducted, gloves of varying thickness may be required for specific tasks. For example:
	Thinner gloves (down to 0.1 mm or less) may be required where a high degree of manual dexterity is needed. However, these gloves are only
	likely to give short duration protection and would normally be just for single use applications, then disposed of.
	• Thicker gloves (up to 3 mm or more) may be required where there is a mechanical (as well as a chemical) risk i.e. where there is abrasion or
	puncture potential
	Gloves must only be worn on clean hands. After using gloves, hands should be washed and dried thoroughly. Application of a non-perfumed
	moisturiser is recommended.
Body protection	See Other protection below
	▶ Overalls.
	▶ PVC Apron.
	PVC protective suit may be required if exposure severe.
	► Eyewash unit.
	Ensure there is ready access to a safety shower.
Other protection	Some plastic personal protective equipment (PPE) (e.g. gloves, aprons, overshoes) are not recommended as they may produce static electricity.
	For large scale or continuous use wear tight-weave non-static clothing (no metallic fasteners, cuffs or pockets).
	Non sparking safety or conductive footwear should be considered. Conductive footwear describes a boot or shoe with a sole made from a
	conductive compound chemically bound to the bottom components, for permanent control to electrically ground the foot an shall dissipate
	static electricity from the body to reduce the possibility of ignition of volatile compounds. Electrical resistance must range between 0 to
	500,000 ohms. Conductive shoes should be stored in lockers close to the room in which they are worn. Personnel who have been issued
	conductive footwear should not wear them from their place of work to their homes and return.

Respiratory protection

Type A Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)

Where the concentration of gas/particulates in the breathing zone, approaches or exceeds the "Exposure Standard" (or ES), respiratory protection is required. Degree of protection varies with both face-piece and Class of filter; the nature of protection varies with Type of filter.

Required Minimum Protection Factor	Half-Face Respirator	Full-Face Respirator	Powered Air Respirator
up to 10 x ES	A-AUS	-	A-PAPR-AUS / Class 1
up to 50 x ES	-	A-AUS / Class 1	-
up to 100 x ES	-	A-2	A-PAPR-2 ^

^ - Full-face

A(All classes) = Organic vapours, B AUS or B1 = Acid gasses, B2 = Acid gas or hydrogen cyanide(HCN), B3 = Acid gas or hydrogen cyanide(HCN), E = Sulfur dioxide(SO2), G = Agricultural chemicals, K = Ammonia(NH3), Hg = Mercury, NO = Oxides of nitrogen, MB = Methyl bromide, AX = Low boiling point organic compounds(below 65 degC)

Cartridge respirators should never be used for emergency ingress or in areas of unknown vapour concentrations or oxygen content.

- The wearer must be warned to leave the contaminated area immediately on detecting any odours through the respirator. The odour may indicate that the mask is not functioning properly, that the vapour concentration is too high, or that the mask is not properly fitted. Because of these limitations, only restricted use of cartridge respirators is considered appropriate.
- Cartridge performance is affected by humidity. Cartridges should be changed after 2 hr of continuous use unless it is determined that the humidity is less than 75%, in which case, cartridges can be used for 4 hr. Used cartridges should be discarded daily, regardless of the length of time used

SECTION 9 Physical and chemical properties

Information on basic physical and chemical properties

	• •				
Appearance	White colored, flammable liquid with aromatic odor; does not mix with water.				
Physical state	Liquid	Relative density (Water = 1)	0.8-0.9		
Odour	Not Available	Partition coefficient n-octanol / water	Not Available		
Odour threshold	Not Available	Auto-ignition temperature (°C)	>200		
pH (as supplied)	Not Applicable	Decomposition temperature (°C)	Not Available		
Melting point / freezing point (°C)	Not Available	Viscosity (cSt)	Not Available		
Initial boiling point and boiling range (°C)	>148	Molecular weight (g/mol)	Not Applicable		

Flash point (°C)	~40	Taste	Not Available
Evaporation rate	Not Available	Explosive properties	Not Available
Flammability	Flammable.	Oxidising properties	Not Available
Upper Explosive Limit (%)	7	Surface Tension (dyn/cm or mN/m)	Not Available
Lower Explosive Limit (%)	0.6	Volatile Component (%vol)	Not Available
Vapour pressure (kPa)	0.2	Gas group	Not Available
Solubility in water	Immiscible	pH as a solution (1%)	Not Applicable
Vapour density (Air = 1)	Not Available	VOC g/L	93.20%

SECTION 10 Stability and reactivity

Reactivity	See section 7
Chemical stability	 Unstable in the presence of incompatible materials. Product is considered stable. Hazardous polymerisation will not occur.
Possibility of hazardous reactions	See section 7
Conditions to avoid	See section 7
Incompatible materials	See section 7
Hazardous decomposition products	See section 5

SECTION 11 Toxicological information

Information on toxicological effects

Inhaled	There is some evidence to suggest that the material can cause respiratory irritation in some persons. The body's response to such irritation can cause further lung damage. Inhalation hazard is increased at higher temperatures. Inhaling high concentrations of mixed hydrocarbons can cause narcosis, with nausea, vomiting and lightheadedness. Low molecular weight (C2-C12) hydrocarbons can irritate muccus membranes and cause incoordination, giddiness, nausea, vertigo, confusion, headache, appetite loss, drowsiness, tremors and stupor. Inhalation of high concentrations of gas/vapour causes lung irritation with coughing and nausea, central nervous depression with headache and dizziness, slowing of reflexes, fatigue and inco-ordination.		
Ingestion	Accidental ingestion of the material may be damaging to the health of the Ingestion of petroleum hydrocarbons can irritate the pharynx, oesophagu mucous. Symptoms include a burning mouth and throat; larger amounts and shallow breathing, abdominal swelling, unconsciousness and convul-	individual. s, stomach and small intestine, and cause swellings and ulcers of the cause nausea and vomiting, narcosis, weakness, dizziness, slow sions.	
Skin Contact	Skin contact with the material may damage the health of the individual; sy There is some evidence to suggest that this material can cause inflamma Open cuts, abraded or irritated skin should not be exposed to this materia The liquid may be able to be mixed with fats or oils and may degrease the dermatitis. The material is unlikely to produce an irritant dermatitis as des The material may accentuate any pre-existing dermatitis condition Entry into the blood-stream, through, for example, cuts, abrasions or lesic prior to the use of the material and ensure that any external damage is su Aromatic hydrocarbons may produce sensitivity and redness of the skin.	ystemic effects may result following absorption. tition of the skin on contact in some persons. al e skin, producing a skin reaction described as non-allergic contact scribed in EC Directives. ons, may produce systemic injury with harmful effects. Examine the skin uitably protected. They are not likely to be absorbed into the body through the skin but	
Eye	This material can cause eye irritation and damage in some persons. Direct eye contact with petroleum hydrocarbons can be painful, and the corneal epithelium may be temporarily damaged. Aromatic species can cause irritation and excessive tear secretion.		
Chronic	Ample evidence exists from experimentation that reduced human fertility is directly caused by exposure to the material. Ample evidence exists, from results in experimentation, that developmental disorders are directly caused by human exposure to the material. Prolonged or repeated skin contact may cause drying with cracking, irritation and possible dermatitis following.

NAPHTHA, PETROLEUM, HYDRODESULFURISED HEAVY	No significant acute toxicological data identified in literature search.	
ISOOCTYLTRIMETHOXYSILANE	Low molecular weight alkoxysilane can cause irreversible lung damage studies suggest with repeated occupational exposure, methoxysilane m Repeat dose toxicity linhalation NOAEC (28 d or 14 d study) 3000 /6h/c SDS	when inhaled at low dose. It is not an obvious skin irritant. However, hay cause damage to the eye and skin as well as cancer. d Bacterial Reverse Mutation Test : not mutagenic * Wacker Silicones
NAPHTHA PETROLEUM, LIGHT AROMATIC SOLVENT	 Inhalation (rat) TCLo: 1320 ppm/6h/90D-1* [Devoe] Most Low Boiling Point Naphthas (LBPNs) have low actute toxicity to or and eye irritating effects. However, some heavier 'cracked' LBPNs. LBPNs are not known to be sensitising to the skin. Animal studies examined the effects of short-term and longer-term expreserifically, exposure to LBPNs resulted in kidney-related issues like in However, the same effects were not seen in female rats, mice, or huma found in male rats. Limited studies found that exposure through inhalati Dermal exposure to one specific LBPN (light cracked naphtha) resulted available regarding the chronic toxicity of LBPNs, but one study expose found ocular and kidney effects at concentrations of 200 mg/m3 and 61 Testing of LBPN genetic effects have shown mixed results when perfor outcomes. Some LBPNS have been shown to cause unusual chromoso 2% benzene) found that unusual DNA synthesis was induced in mice vesulted in in replicative DNA synthesis in rat kidney cells via oral and in LBPN substances are negative, the potential for genotoxicity of LBPNs genotoxicity results. Limited evidence exists demonstrating the carcinogenicity of skin and b incidence of cancer due to LBPNs had several limitations, including a terfects of gasoline combustion products from the effects of gasoline its potential in inhalation studies among LBPN substances. One such stud resulted in promotion of liver tumours in female mice at an dosage of 6. European Commission and the International Agency for Research on C these substances were classified by the European Commission (2008) IARC has classified gasoline as a Group 2A carcinogenic (probably carcinogenic to humans). Inductior exposure to mice to heavy catalytic cracked naphtha, light catalytic cracked naphtha function threases in tumour formation or no tumours were observe sweetened naphtha, light catalytic cracked naphtha, sole catalytic dracked naphtha function typesenses in thomour formation were observed when fe	ral, dermal and inhalation routes of exposure, and mild to moderate skin 3PNs with greater olefinic content) have been found to be more irritating obsure to LBPNs through inhalation or oral routes. In male rats creased kidney weight, kidney lesions, and hyaline droplet formation. ans due to a mechanism of action involving a particular enzyme only ion caused an increase in liver weight in both male and female rats. In skin irritation and changes at low doses in rats. Few studies were ed mice and rats to unleaded gasoline (containing 2% benzene) and 70 mg/m3, respectively. med using in vitro studies. In vivo studies of LBPNs showed no negative ome formation. Testing of genotoxicity of unleaded gasoline (containing ia oral exposure. Similarly, unleaded gasoline with 2% benzene content halation exposures. While the majority of in vivo genotoxicity results for as a group cannot be disregarded based on the mixed in vitro whod following exposure to LBPNs. The published studies studfying the ack of exposure data and the inability to definitively exclude the exposure eff. Only unleaded gasoline has been examined for its carcinogenic (y foudn that inhalation of exposure of unleaded gasoline (2% benzene) 170 mg/m3 over 2 years, but did not initiate tumour formation. Both the cancer (IARC) have classified LBPN substances as carcinogenic. All of as Category 2 carincogens (benzene content = 0.1% by weight). The one both benign and malignant tumours has been found following dermal dxed naphtha, light straight-run naphtha and naphtha. On the other hand, dy the light alkylate naphtha, heavy catalytic reformed naphtha, soline was dermally applied to mice. y of LBPN substances evaluated. Most of these studies were carried out s observed for a few naphthas. Decreased foetus body weight and an rats were exposed to light aromatized solvent naphtha. On the other hand, rats were exposed to light aromatized solvent naphtha. The skin irritation the sitwin absorption are unlikely to occur as the skin irritati

	Mutation-causing ability: No evidence of mutation-causing ability and genetic toxicity was found in animal and laboratory testing. Reproductive and developmental toxicity: No definitive effects on reproduction were seen, although reduction in weight in developing animals may been seen at concentrations that are toxic to the mother. Petroleum contains aromatic (benzene, toluene, ethyl benzene, napthalene) and aliphatic hydrocarbons (n-hexane), which can result in many detrimental health effects, including, cancer, tumour formation, hearing loss, and nervous system toxicity. Animal testing shows breathing in petroleum causes tumours of the liver and kidney; these are however not considered to be relevant in humans. Similarly, exposure to gasoline over a lifetime can cause kidney cancer in animals, but the relevance in humans is questionable. Most studies involving gasoline have shown that gasoline does not cause genetic mutation, including all recent studies in living human subjects (such as in petrol service station attendants). Animal studies show concentrations of toluene (>0.1%) can cause developmental effects such as lower birth weight and developmental toxicity to the nervous system of the foetus. Other studies show no adverse effects on the foetus. Prolonged contact with petroleum may result in skin inflammation and make the skin more sensitive to irritation and penetration by other metroice.
DI-N-OCTYL TIN DILAURATE	For alighter fully acids (and satis) Acute oral (LBOR) values in rats for both were greater than s-2000 mg/kg bw Clinical signs were generally associated with poor condition incliving animization of high does (satisfactor, damhoes, stating, plotenetic) and lethargy). Thes were no adverse effects on body weight effect and ey inflation point and the set stated occuptors, is chain horgh dependent and decreases with increasing chain length According to severely Intelling or corrosite, while the C12 alightatic acid is intelling, and the C14-22 alightatic acids are every litrating, thuman skin inflation obstates using more realistic exposures (O-mixing). For our 24-horsy indicates that the e1-hald state is a carceave to the eyes. Deminal biological acids are inflation acids and social biological acids are inflating to the eye while the C14-22 alightatic acids are out intration. The in twice prior that of the ammonium satis does not follow chain length dependence; the C16 and C16 same solutions is are conceive to the eyes. Deminal absorption: The in twice prior that of the ammonium satis does not follow chain length dependence; the C16 and C16 same solutions is also does and the eyes of the approxements of 0.01, 0.12, 0.14, C14, C14 and C16 satis acids (and C16 satis base). The in twice prior that of the ammonium satis does not follow chain length. Repeated does to carcing (anage or died) exposure to alightatic acids did not result in systemic toxicity with NOAELs greater than the limit dose of 1000 mg/kg bio. Alightatic acids, bin ot appear to be mutagenito or classogenic in viteo on vivo Alightatic acids and the NOAELs. Reproductive toxicity Reproductive toxicity Alightatic acids and the NOAELs greater than the limit dose of the adiabation of alightatic acids and the NOAELs correspond to the mainture does that acids of an exposure to alightatic acids and the NOAELs correspond to the mainture does that acids of an exposure to alightatic acids and the NOAELs correspond to the mainture does that acontex. SECTION 13 Disposal considerations

Waste treatment methods	
Product / Packaging disposal	 Containers may still present a chemical hazard/ danger when empty. Return to supplier for reuse/ recycling if possible. Otherwise: If container can not be cleaned sufficiently well to ensure that residuals do not remain or if the container cannot be used to store the same product, then puncture containers, to prevent re-use, and bury at an authorised landfill. Where possible retain label warnings and SDS and observe all notices pertaining to the product. Legislation addressing waste disposal requirements may differ by country, state and/ or territory. Each user must refer to laws operating in their area. In some areas, certain wastes must be tracked. A Hierarchy of Controls seems to be common - the user should investigate: Reduction Reuse Recycling Disposal (if all else fails) This material may be recycled if unused, or if it has not been contaminated so as to make it unsuitable for its intended use. If it has been

 contaminated, it may be possible to reclaim the product by filtration, distillation or some other means. Shelf life considerations should also be applied in making decisions of this type. Note that properties of a material may change in use, and recycling or reuse may not always be appropriate. DO NOT allow wash water from cleaning or process equipment to enter drains. It may be necessary to collect all wash water for treatment before disposal. In all cases disposal to sewer may be subject to local laws and regulations and these should be considered first. Where in doubt contact the responsible authority. Recycle wherever possible. Consult manufacturer for recycling options or consult local or regional waste management authority for disposal if no suitable treatment disposal facility can be identified. Dispose of by: burial in a land-fill specifically licensed to accept chemical and / or pharmaceutical wastes or Incineration in a licensed apparatus (after admixture with suitable combustible material). 	
 DO NOT allow wash water from cleaning or process equipment to enter drains. It may be necessary to collect all wash water for treatment before disposal. Sea transport (IMDG-Code / GGVSee)

14.1. UN number	1993		
14.2. UN proper shipping name	FLAMMABLE LIQUID, N.O.S. (contains naphtha petroleum, light aromatic solvent, naphtha, petroleum, hydrodesulfurised heavy and isooctyltrimethoxysilane)		
14.3. Transport hazard class(es)	IMDG Class	3	
	IMDG Subrisk	Not Applicable	

14.4. Packing group	ш		
14.5 Environmental hazard	Marine Pollutant		
14.6. Special precautions for user	EMS Number	F-E, S-E	
	Special provisions	223 274 955	
	Limited Quantities	5 L	

14.7.1. Transport in bulk according to Annex II of MARPOL and the IBC code

Not Applicable

14.7.2. Transport in bulk in accordance with MARPOL Annex V and the IMSBC Code

Product name	Group
naphtha, petroleum, hydrodesulfurised heavy	Not Available
isooctyltrimethoxysilane	Not Available
naphtha petroleum, light aromatic solvent	Not Available
di-n-octyl tin dilaurate	Not Available

14.7.3. Transport in bulk in accordance with the IGC Code

Product name	Ship Type
naphtha, petroleum, hydrodesulfurised heavy	Not Available
isooctyltrimethoxysilane	Not Available
naphtha petroleum, light aromatic solvent	Not Available
di-n-octyl tin dilaurate	Not Available

SECTION 15 Regulatory information

Safety, health and environmental regulations / legislation specific for the substance or mixture

naphtha, petroleum, hydrodesulfurised heavy is found on the following regulatory lists	3
Australia Hazardous Chemical Information System (HCIS) - Hazardous Chemicals	Chemical Footprint Project - Chemicals of High Concern List
Australian Inventory of Industrial Chemicals (AIIC)	International Agency for Research on Cancer (IARC) - Agents Classified by the IARC Monographs - Not Classified as Carcinogenic
isooctyltrimethoxysilane is found on the following regulatory lists	
Australian Inventory of Industrial Chemicals (AIIC)	
${ig }$ naphtha petroleum, light aromatic solvent is found on the following regulatory lists	
Australia Hazardous Chemical Information System (HCIS) - Hazardous Chemicals	Chemical Footprint Project - Chemicals of High Concern List
Australian Inventory of Industrial Chemicals (AIIC)	International Agency for Research on Cancer (IARC) - Agents Classified by the IARC Monographs - Not Classified as Carcinogenic
di-n-octyl tin dilaurate is found on the following regulatory lists	
Australia Hazardous Chemical Information System (HCIS) - Hazardous Chemicals	Chemical Footprint Project - Chemicals of High Concern List
Australian Inventory of Industrial Chemicals (AIIC)	

National Inventory Status

National Inventory	Status	
Australia - AIIC / Australia Non-Industrial Use	Yes	
Canada - DSL	Yes	
Canada - NDSL	No (naphtha, petroleum, hydrodesulfurised heavy; isooctyltrimethoxysilane; naphtha petroleum, light aromatic solvent; di-n-octyl tin dilaurate)	
China - IECSC	Yes	
Europe - EINEC / ELINCS / NLP	Yes	
Japan - ENCS	No (isooctyltrimethoxysilane)	
Korea - KECI	Yes	
New Zealand - NZIoC	Yes	
Philippines - PICCS	Yes	
USA - TSCA	Yes	
Taiwan - TCSI	Yes	
Mexico - INSQ	No (isooctyltrimethoxysilane; di-n-octyl tin dilaurate)	
Vietnam - NCI	Yes	
Russia - FBEPH	No (isooctyltrimethoxysilane; di-n-octyl tin dilaurate)	
Legend:	Yes = All CAS declared ingredients are on the inventory No = One or more of the CAS listed ingredients are not on the inventory. These ingredients may be exempt or will require registration.	

SECTION 16 Other information

Revision Date	08/09/2023	
Initial Date	24/08/2023

SDS Version Summary		
Manalan	Data of Undata	

Version	Date of Update	Sections Updated
3.1	08/09/2023	Hazards identification - Classification, Name

Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.
