

PREPUNCHED GALVANISED FLAG BAR

TPO roofing accessory

January 2025

DESCRIPTION:

The PREPUNCHED FLAG BAR is a galvanised steel sheet characterised by the presence of holes drilled every 25 mm.

The PREPUNCHED FLAG BAR is used for the mechanical fastening of PVC and TPO waterproofing membranes, used as a perimeter and vertical fixing element, on the roofing.

The PREPUNCHED FLAG BAR is made of galvanised steel sheet, therefore is not suitable for use in situations where it can come in contact with aggressive substances (corrosive liquids and gases, etc).

APPLICATION:

The PREPUNCHED FLAG BAR is placed above the waterproofing membrane and is fixed with specific fasteners at the bottom of all vertical elements. Through the bar, the load is evenly distributed. To be combined with the application of the PREPUNCHED FLAG BAR:

- FLAG BAR END PROTECTION, to protect the waterproof membrane from the puncturing by the edges of the PREPUNCHED FLAG BAR.

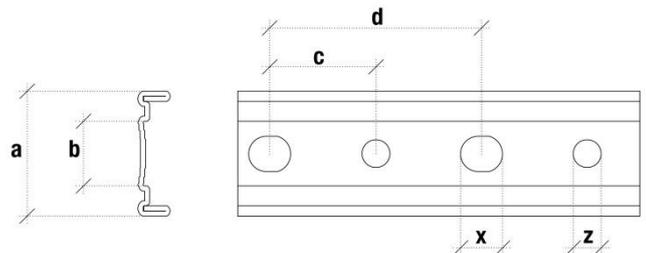

For complete information on product installation, please contact your Equus Representative.

PACKAGING:

SPECIFICATIONS	FLAGON PREPUNCHED GALVANISED FLAG BAR
