

EQUUS CHEVALINE EPISTIXX FLOORING

Epoxy coating system for interior floors

Chevaline Epistixx Flooring is an epoxy floor coating system for interior surfaces. **Epistixx** is an easy to maintain, economical floor coating, giving it a wide variety of applications from residential garage floors to large food processing plants.

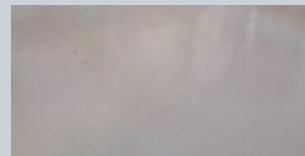

The epoxy coating provides the building owner with a hygienic, medium duty floor finish made up of a three layer system. A two-component waterborne epoxy primer and bodycoat with high adhesion, and a two-component waterborne epoxy topcoat that provides a glossy, fast-curing finish. These properties make **Epistixx** an ideal solution where solvent release during application is not desirable, and fast curing is essential.

AsureQuality certified and Clean Room standard ISO 14644 approved, **Epistixx** is a great solution for the food processing and agricultural industries as a medium duty flooring for workshops, sheds, and packhouses.

Chevaline Epistixx can be used for some exterior applications, and in industrial environments by specific design only.

Available Colours:

Grey

Chevaline Epistixx is supplied as Standard Grey (00A05) and White. Custom colours are available to match any colour chart.

Key Benefits:

- 100% NZ made

- Extended Warranties available

EQUUS CHEVALINE EPISTIXX FLOORING

Epoxy coating system for interior floors

Chevaline Epistixx has four different variants, selections are based on specific project and end use requirements.

Epistixx Rapid

Smooth, medium duty, epoxy floor coating for garage and workshop floors in residential or light commercial situations.

Epistixx Rapid NS (Non-Skid)

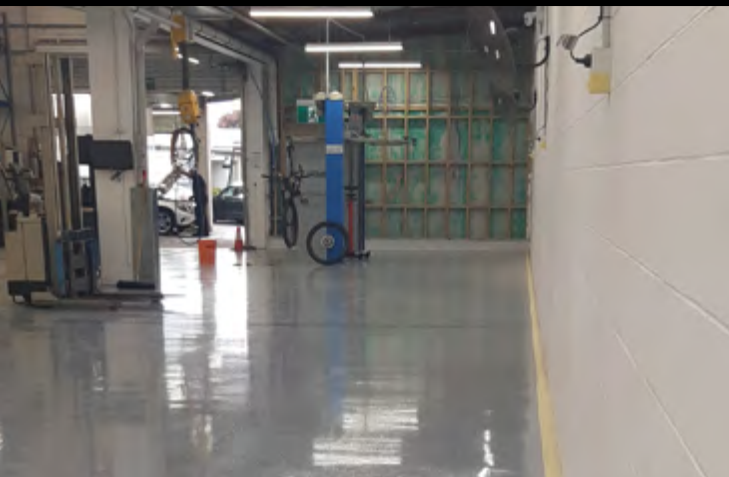

Medium duty, epoxy floor coating with aggregate to create a non-skid finish. A solution for light industrial wet floors, or where non slip is required.

Epistixx SL

Trowel applied, self-levelling epoxy floor coating. Thicker and integrally bonded to the substrate to level out uneven concrete, creating a smooth, level finish.

Epistixx CP

Epoxy carpark coating used to seal and protect new and existing interior concrete carparks, or in high traffic interior workshops.
