

EQUUS JACKS

SUPPORTING ELEVATED SURFACES

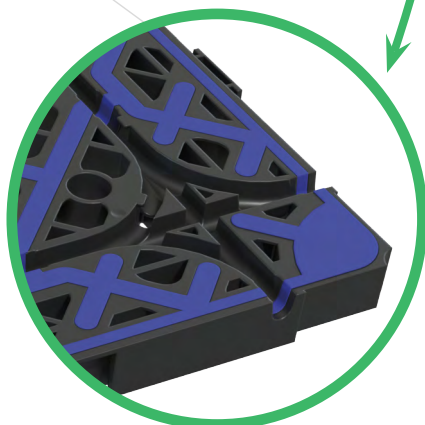

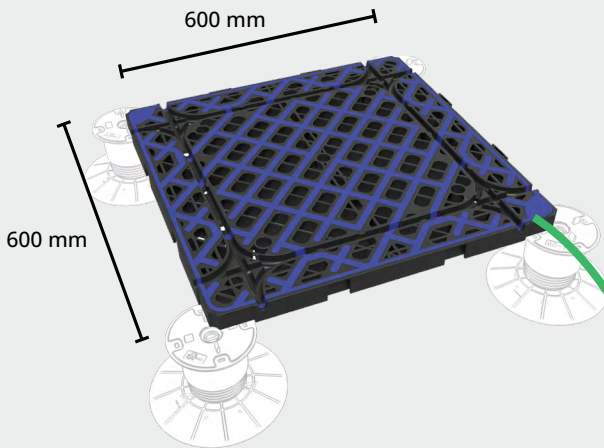

Freedom to Create

The Equus Jacks Poker Grid System is a versatile support system designed to maximise the performance and flexibility of raised outdoor flooring.

Engineered for strength, stability and installation versatility, the Poker Grid System supports a wide range of applications, including integrated irrigation for landscaped areas, under-paver heating systems and multi-format paving layouts.

The Poker Plate features an innovative bi-material construction, combining a durable polypropylene body with integrated thermoplastic rubber inserts. This unique design provides enhanced slip resistance, reduces noise and vibration, and delivers reliable long-term performance in demanding outdoor environments.

Manufactured from high-quality polypropylene with integrated heat-resistant thermoplastic rubber inserts, each 600 × 600 mm panel features an interlocking dovetail connection, creating a secure, modular support grid that is quick to assemble and highly adaptable.

EQUUS JACKS

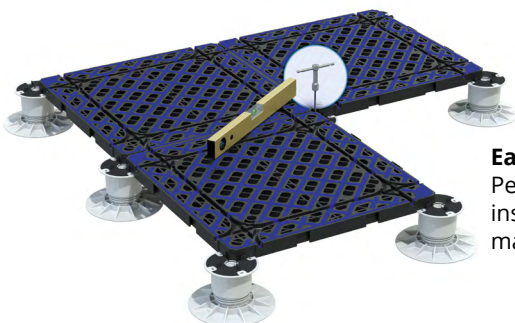

Impact-resistant design for enhanced safety in high raised floor applications

Equus Jacks Poker Grid System

Flexible by Design

The Equus Jacks Poker Grid System is fully compatible with the Equus Jacks Queen and Lord ranges, allowing different paving formats and support heights to be combined within the same installation. Its modular design provides greater flexibility when laying multi-format pavers and simplifies the installation of complex outdoor flooring designs.

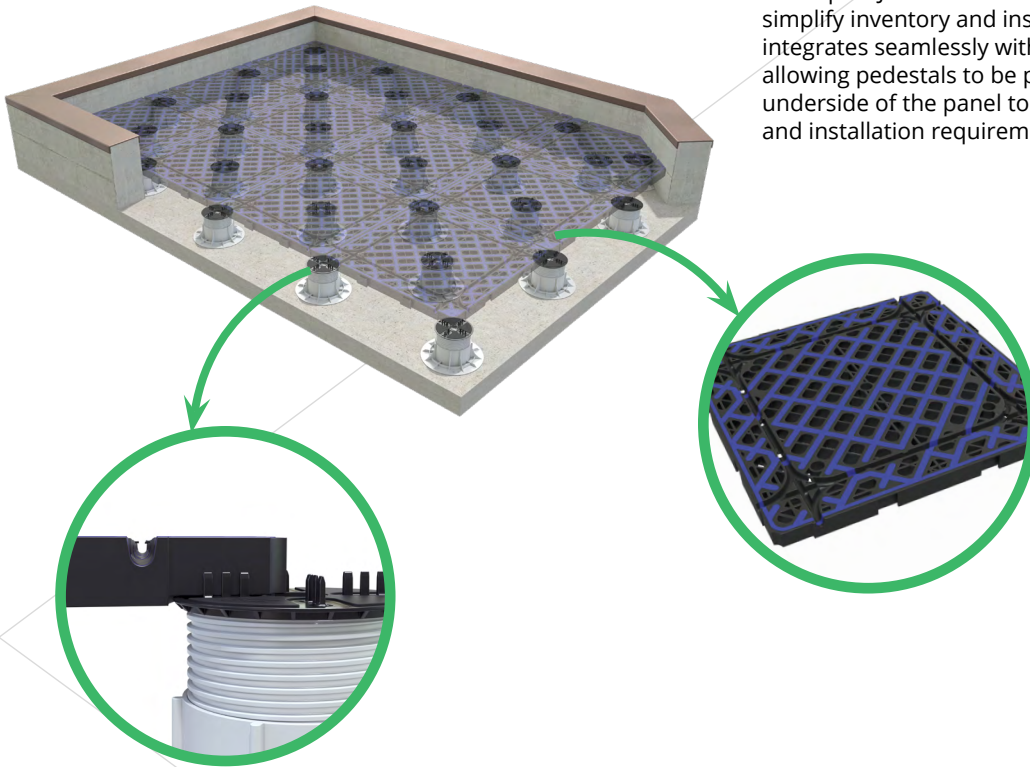

Easy Height Adjustment

Pedestal height can be easily adjusted after the Poker Grid System has been installed using the Power Key, allowing quick and precise adjustment while maintaining a stable, level support surface.

One component for all situations

Optimised by Design

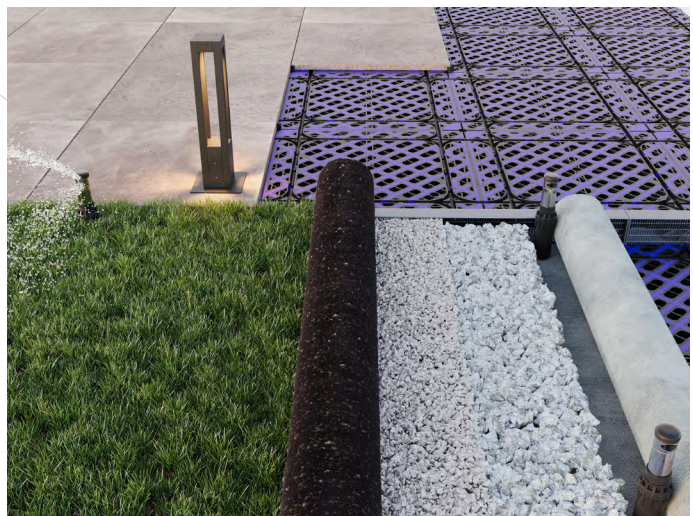

The Equus Jacks Poker Grid System is designed to simplify inventory and installation. Each grid panel integrates seamlessly with the support system, allowing pedestals to be positioned anywhere on the underside of the panel to suit specific layout, cutting and installation requirements.

Suitable for Landscaped Areas

The Poker Grid System is designed to support raised landscaped areas, making it ideal for podiums, terraces and rooftop gardens.

The modular grid accommodates irrigation tubing, geotextile fabric, growing media and turf, providing a practical solution for creating raised lawn and planted areas while maintaining the benefits of a raised flooring system.

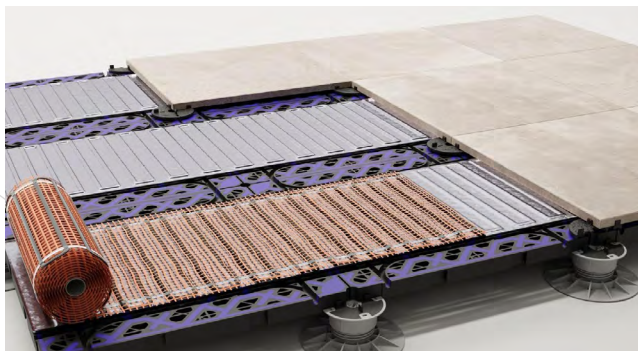

Multiformat compatibility

Ideal for any type of covering

Suitable for a wide range of surface finishes, the Poker Grid accommodates ceramic and porcelain pavers, natural stone, concrete, timber decking, and both natural and synthetic turf.

Its versatile grid design also allows different surface finishes to be combined within the same installation, providing greater flexibility for creative outdoor spaces.

Designed for heated outdoor floors

The Poker Grid is suitable for use with under-paver heating systems, making it an ideal solution for heated raised outdoor flooring.

Tested with radiant heating panels beneath ceramic and porcelain pavers, the system provides a stable and reliable platform while allowing efficient integration of heating components.

Enhanced safety by design

The Poker Grid helps support pavers in the event of accidental breakage, reducing the risk of sections falling through the raised floor.

The integrated grid provides an additional level of safety while maintaining the stability and integrity of the flooring system.
