

POWER KEY

Deck Jack height adjustment tool

July 2026

DESCRIPTION:

The Equus Jacks Power Key is an ergonomic adjustment tool in the Tools line, designed for all Queen Pedestals and manufactured from highly torsion-resistant steel. It consists of two components: a handle and a flat-head screwdriver. The handle features a sliding bar that allows it to be used in either a T or L configuration, depending on the application. The screwdriver inserts into the handle and is secured with a side set screw. This design ensures ease of use and allows for quick screwdriver replacement when worn.

USE:

The Power Key handle can be configured in a symmetrical **T-shape** for comfortable support adjustment in standard applications, or in an asymmetrical **L-shape** to provide better leverage when working along wall edges or in corners. The screwdriver features a flat-blade tip engineered for precise engagement with the **Queen** range. As the component most exposed to wear, the screwdriver can be quickly and easily replaced by loosening the side set screw.

Note: The Power Key is supplied as a complete tool, comprising both the handle and screwdriver, although each component can also be purchased separately upon request.
