Soprema Sopraseal Stick

EQUUS SOPREMA SOPRASEAL STICK VP is a self-adhered, vapour-permeable air barrier membrane that controls air movement through exterior wall assemblies. When combined with exterior insulation, the system improves airtightness, energy efficiency and moisture management while supporting durable, high-performing building envelopes.

SOPRASEAL STICK VP uses a high-tack adhesive backing for fast installation on masonry, concrete, timber and gypsum substrates. By reducing uncontrolled air leakage, it helps minimise heat loss, condensation risk and moisture-related damage within wall assemblies.

The system can be paired with SOPRAROCK M mineral wool insulation to provide continuous exterior thermal performance while reducing thermal bridging. SOPRAROCK M also offers excellent fire, acoustic and moisture-management properties. Together, the systems support H1 Energy Efficiency compliance and are backed by Equus technical expertise.

Key Product Benefits:

Optimum permeability (11 perm [ASTM E96-A])

No primer required

UV exposure up to 180 days

High quality adhesion

Self-sealing membrane ensuring continuous waterproofing

Service temperature -40 ° to 85 °C

Technical Support:

- Project-specific specifications & details
- Approved installation nationwide & onsite QA
- System warranties
